

NDRD International Training Program

The NDRD Training Program offers clinicians the opportunity to learn about the clinical needs of children with rare neurodegenerative disorders.

Our unique multidisciplinary approach to translational research provides the opportunity to integrate knowledge from different disciplines. Clinicians trained in our program can become part of our collaborative research network.

The NDRD has performed more than 1,600 multi-disciplinary evaluations on more than 550 children with rare neurodegenerative disorders and trained

clinicians from 9 countries around the world.

The NDRD encourages clinicians from a variety of specialties and take part in our clinical and research program. Previous trainees have included:

- Medical Students
- Residents
- Pediatric Fellows
- Neurologists
- Audiologists
- Speech Therapists
- Physical Therapists
- Geneticists
- Bone Marrow Transplanters
- Psychologists
